Christin Gilbert

Digital experience designer & builder

VANCOUVER, BC

My approach to experience design.

My background in cognitive neuropsychology informs how I design for cognitive accessibility: making the next step easier to find and letting people set their own pace.

I design interfaces and build working websites and tools. I document the components and behaviours so teams can maintain and extend the work.

How my work connects / page 03

Method and tools / page 22

How my work connects.

Brand identity and storytelling shape the work; cognitive accessibility informs how people experience it.

A SHARED LENS

Cognitive Accessibility

Clarity in what people see, understand and do.

Visual Design & Creative Production

Creates campaign graphics, imagery, videos and visual storytelling.

Experience Design

Connects visual storytelling with digital experiences, making information and actions clear.

Explore

Go back

Design Systems

Documents typography, colour, imagery and layout rules so the work stays consistent.

A clear heading

Supporting text.

Action

Motion Systems

Defines how movement supports communication and interaction.

Timing | Feedback | Control

Applied across brand campaigns, websites and digital products.

CAMPAIGN DIRECTION / CREATIVE SYSTEMS

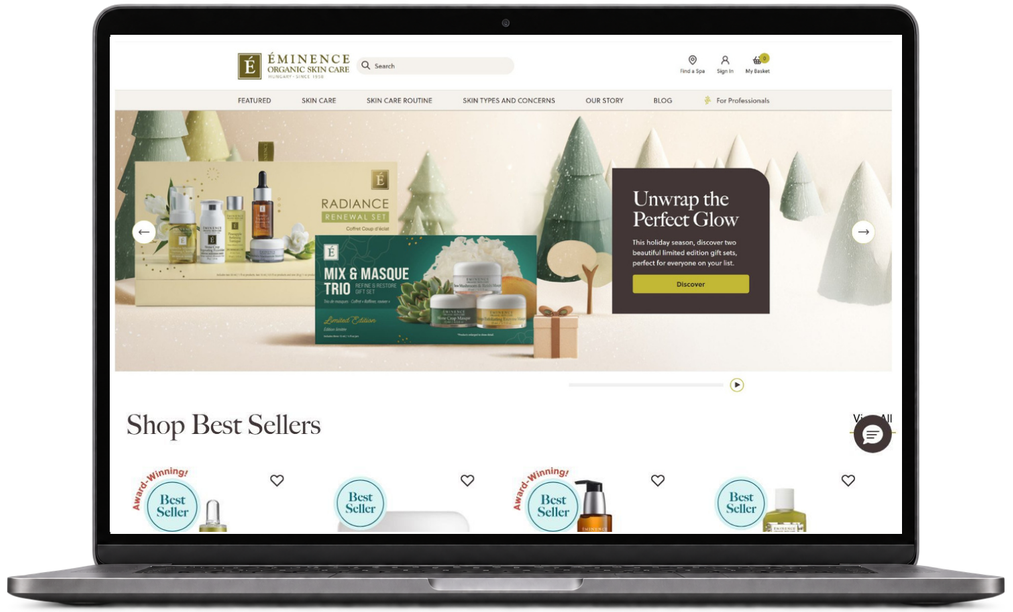

Éminence Organic Skin Care

From campaign direction to everyday production.

I created digital campaign guides and led the Digital Visual Style Guide, connecting creative direction with the details a production team needs.

MY ROLES

Digital Content Specialist to Digital Creative Team Lead
March 2020 - January 2026

Homepage composite / Holiday hero and product content

Creative production

Planning, content production, team learning and documented standards.

Production systems

6,000+ files organized with shared naming and searchable metadata.

TOOLS ACROSS ÉMINENCE CAMPAIGN WORK Adobe Creative Cloud (Photoshop, Illustrator, Premiere Pro, InDesign) · Adobe Firefly · Figma · Midjourney · Magnific AI · Asana

One brand, three campaign personalities.

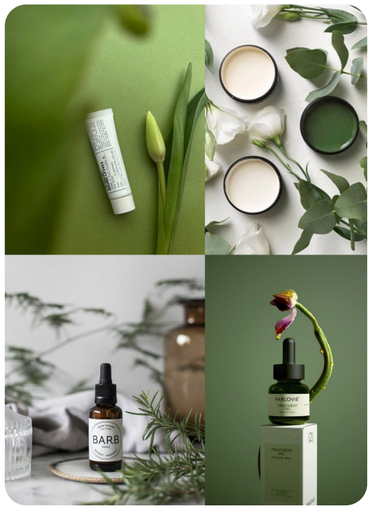

A familiar brand foundation, with a distinct seasonal direction.

Summer 2023

Bright, relaxed summer care.

My contribution: digital creative guidelines, content production and documentation.

Holiday 2023

Gifting and a quiet self-care ritual.

My contribution: digital creative guidelines and a shared reference for campaign execution.

Spring 2024

Charcoal & Black Seed Collection.

Collaborative brand context: collection direction and applications from the team guide.

Make design decisions visible.

The creative guide brings hierarchy, spacing and contrast into the composition review.

Always determine which word or part of the words needs to be visible first , hierarchy of information is important to guide our audience for easy read or "scan".

Original

Be conscious with unusable empty space.
Empty space is great for balance in the composition.

Consideration

Button as CTA will need to have more contrast. Increased contrast will make our CTA more accessible.
Increase visibility means user more likely to click. I used #45493B for this button.

Summer 2023 Digital Creative Guidelines, p. 16 / Original and considered layouts are documentation examples.

Make the standards usable.

A Figma library pairs each content block with its purpose, format, ratio and placement. Accessibility guidance sits beside the layout rules.

Guide detail / Content formats and aspect ratios

Alt text / example from the guide

"A spa professional wearing an Éminence Organics apron performs a facial treatment on a client lying on a treatment bed."

SPRING 2026 / PREPARED BEFORE DEPARTURE

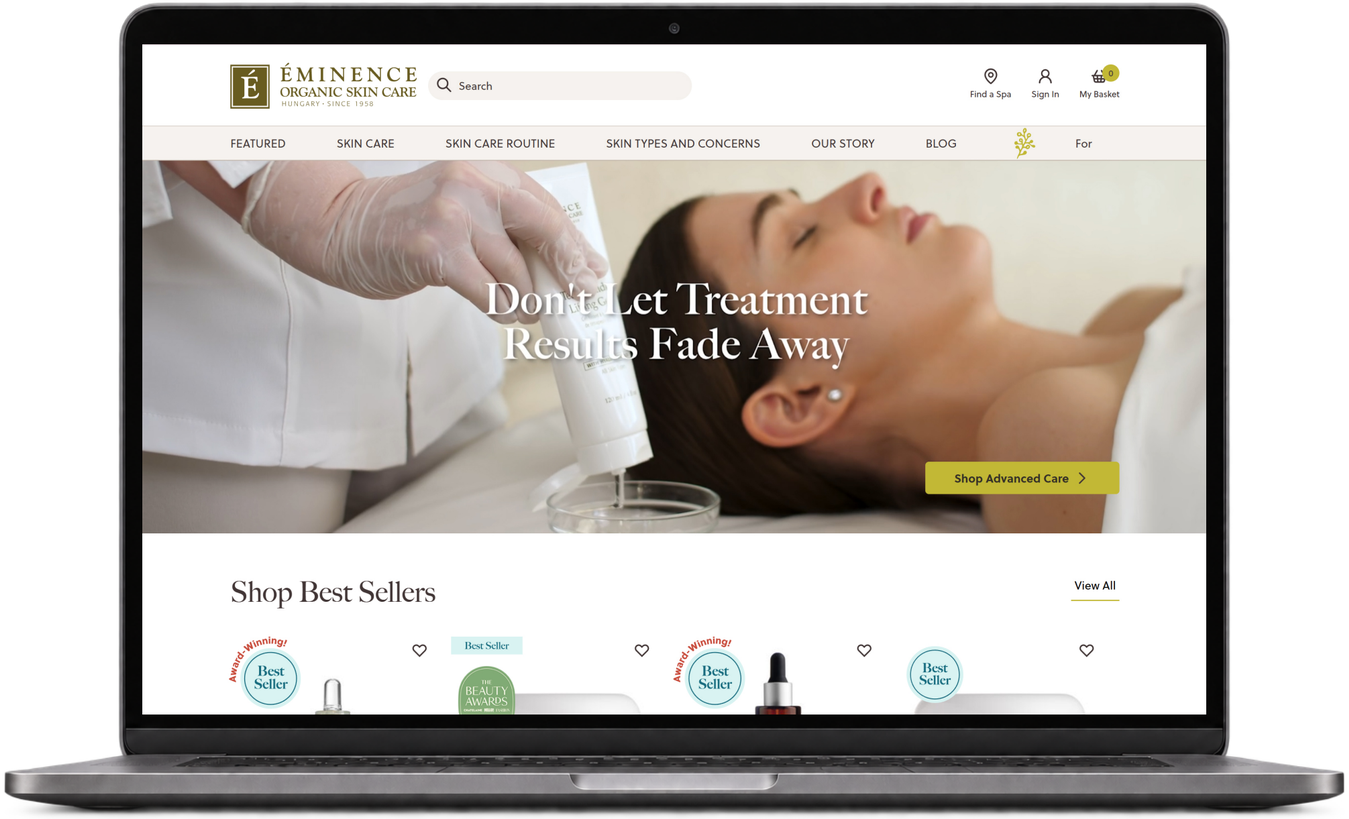

From creative brief to campaign.

I developed the creative brief, coordinated pre-production and directed the shoot with external photography and video partners.

One visual direction

Wardrobe, lighting, props and tone connected the spa setting with at-home aftercare.

Campaign work prepared before my departure in January 2026.

Finished homepage application / Supplied campaign work

Build capability with clear limits.

I developed a three-session AI learning series: text to image, still to motion, then content to campaign.

01 / EXISTING PRODUCT PHOTOGRAPHY

The supplied product asset.

02 / COMPOSITED CAMPAIGN ENVIRONMENT

Existing product asset + AI-generated environment.

Production guardrails

Shared prompts and guardrails allowed generated environments and secondary elements.

Product claims, textures and skin-result imagery were outside the training scope.

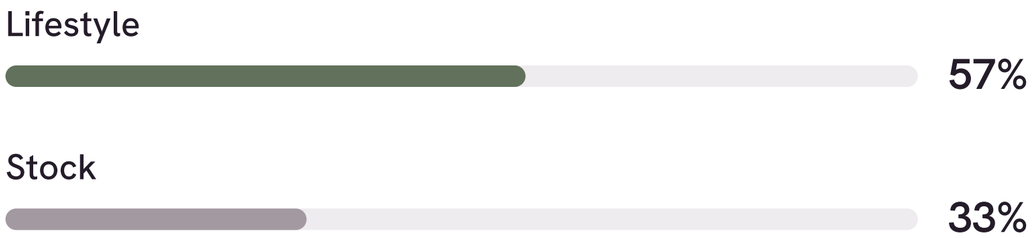

Use measurement to shape the next brief.

Share of reported email revenue by imagery type in the reviewed set.

F2025 MEASUREMENT SAMPLE

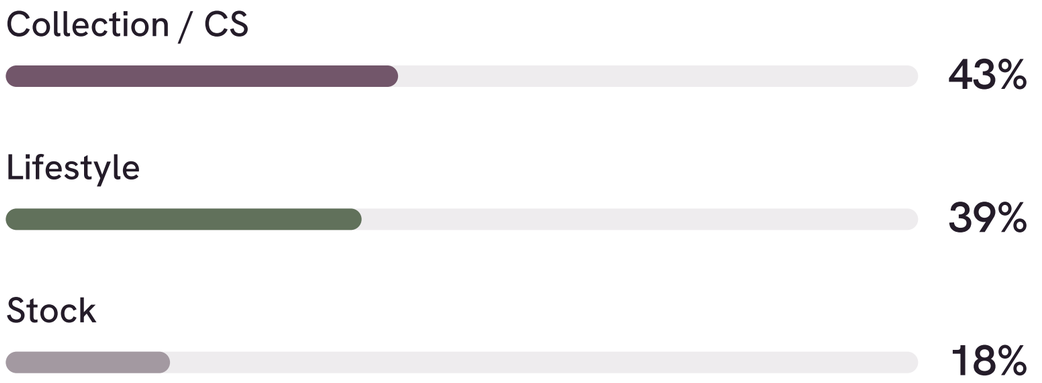

Separate from the 2023-2024 campaign examples.

Retail customers

Next brief: prioritise lifestyle directions for retail email tests, then review audience and offer alongside the design.

Spa partners

Next brief: compare collection and lifestyle imagery for the same audience and offer.

Source: F2025 Visual Creative Production Summary, p. 9. Selected retail categories are shown. These are revenue shares, not conversion lifts.

INDEPENDENT PRODUCT / FREE BETA

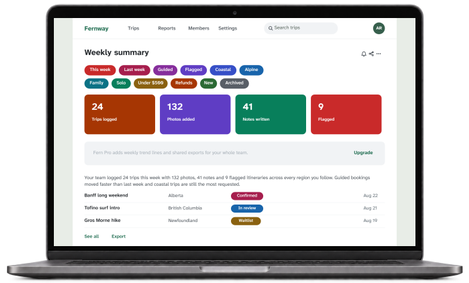

Bezier Loupe

Make visual demand easier to review.

I designed and built a Figma plugin for cognitive accessibility reviews. It measures 12 visible properties of a selected frame, with the source and limits behind each finding.

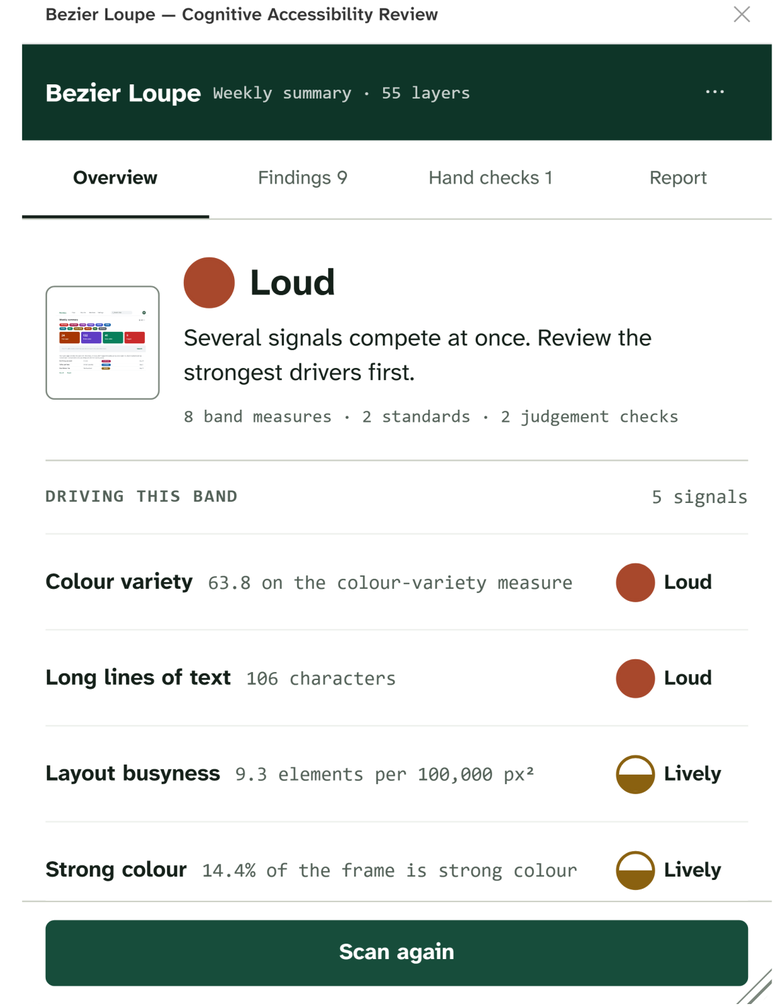

MY ROLE

Independent product design and plugin development, informed by cognitive neuropsychology.

Selected example frame

Calm, Lively and Loud give designers a starting point for reviewing a frame.

Figma plugin / Scan overview

Explore Bezier Loupe

Project index

Keep the reasoning visible.

Use the finding as a prompt for judgement.
Inspect the evidence before deciding what to change.

01 / Inspect

Open the measurement, calculation, source and known limit.

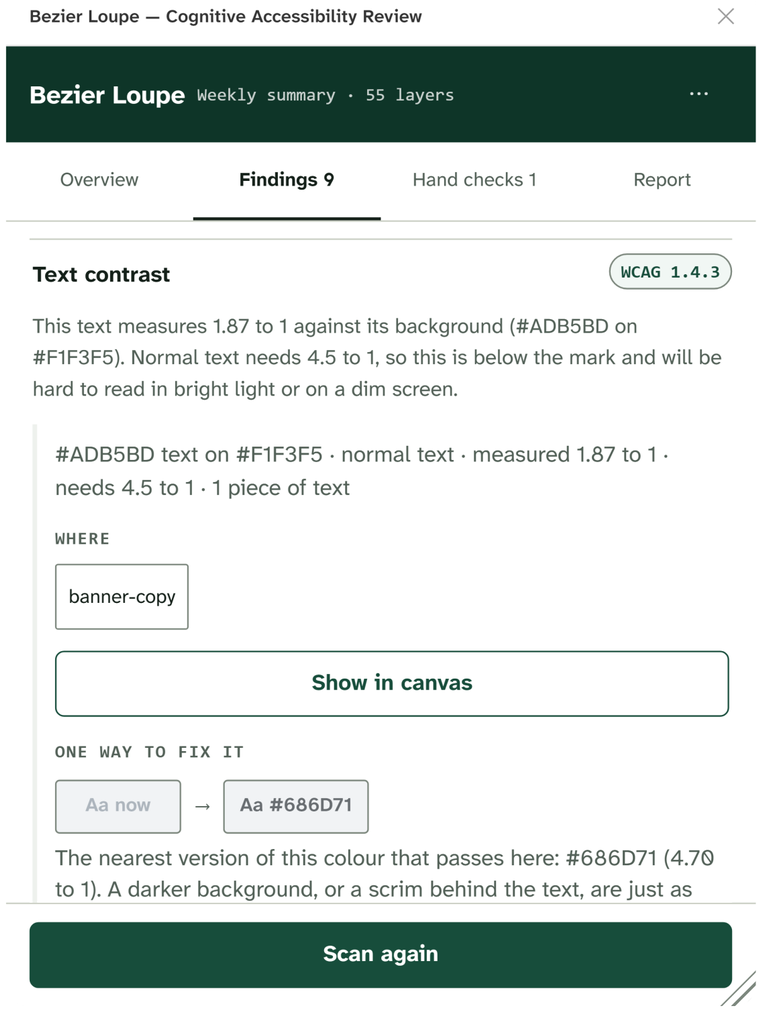

02 / Decide

Weigh the finding against the task and design context.

03 / Keep the reasoning

Export the review as HTML, a print-ready PDF or Markdown.

The tool reviews visible design properties.
It does not establish a person's cognitive load or overall accessibility.

Figma plugin / Expanded contrast finding

PUBLISHED CHROME EXTENSION

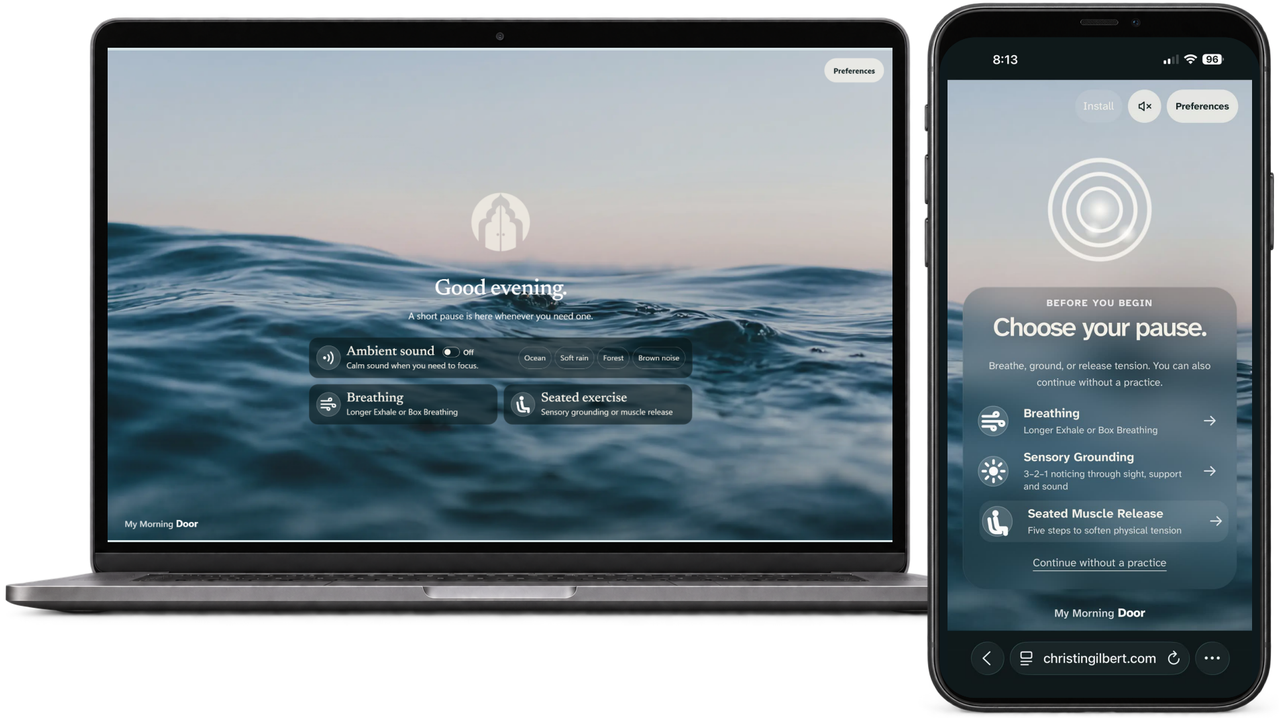

My Morning Door

A pause people can choose.

I designed and built a new-tab extension with personal photography and optional breathing, grounding and seated-release practices.

MY ROLE

Concept, interaction design, cognitive accessibility, photography, writing and front-end implementation.

Desktop extension + mobile web / Home and practice selection

No tasks, streaks or completion counts.
Entering the pause and skipping it are both intended paths.

Read the case study

Project index

Make each layer optional.

The same principle carries through practices, sound, guidance and motion.

01 / A clear way out

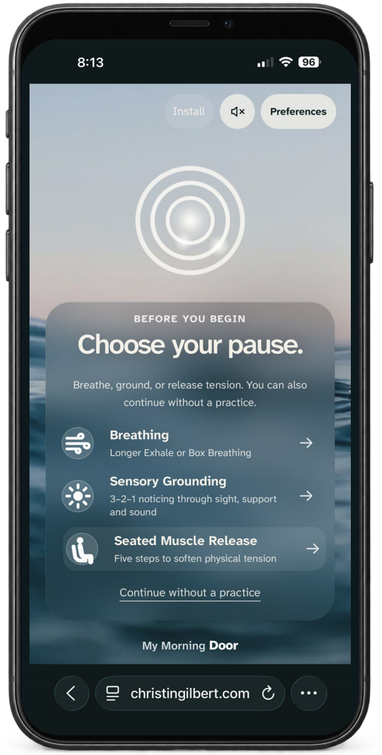

"Continue without a practice" stays visible. Skipping is an intended path.

02 / Quiet by default

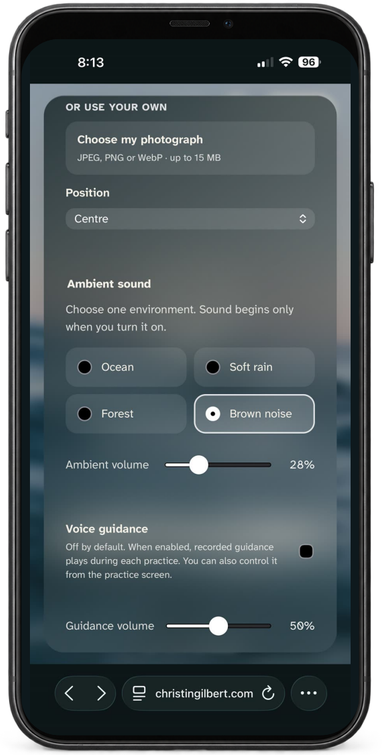

Sound and voice guidance start off. People choose what they want to hear.

03 / Control over movement

Full, Gentle and Still modes sit alongside the browser's reduced-motion setting.

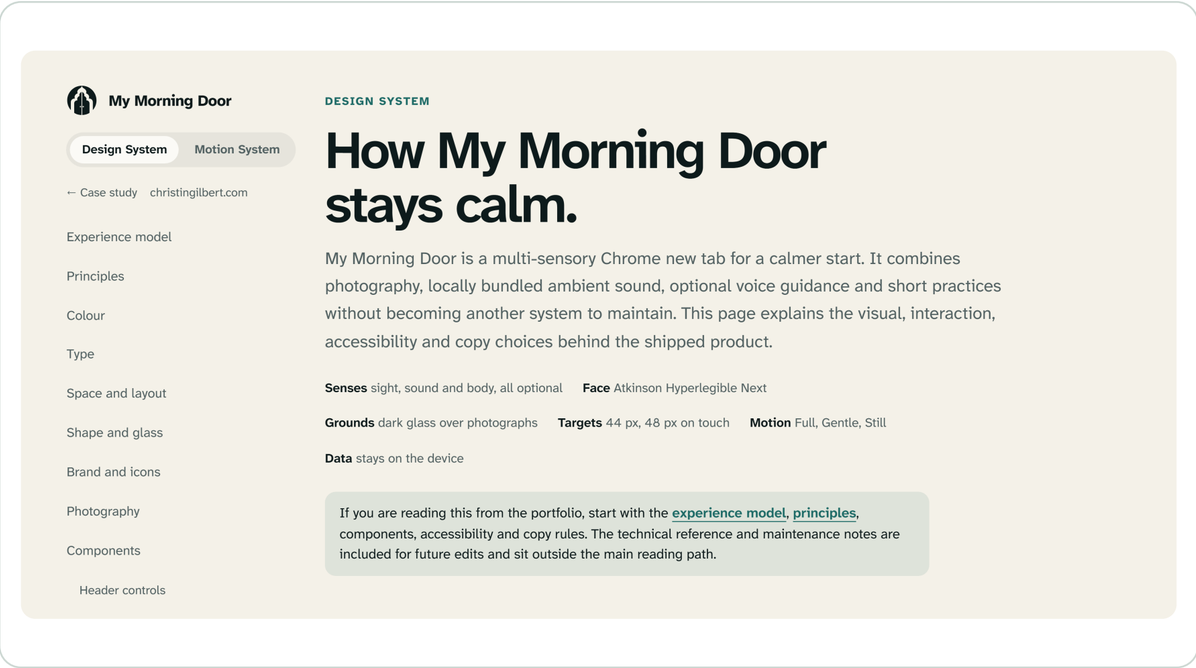

Mobile web version / Practice selection

Mobile web version / Preferences

Document the product that shipped.

Design system / Complete introduction and guidance

Explore the design system

Explore the motion system

View the Chrome Web Store listing

Grounded in implementation

The visual and motion systems document the extension's actual CSS, photographs and timing values.

Privacy as a design constraint

No account, analytics or browsing-history access. Preferences stay in the browser; interface assets and audio are bundled locally.

Delivered

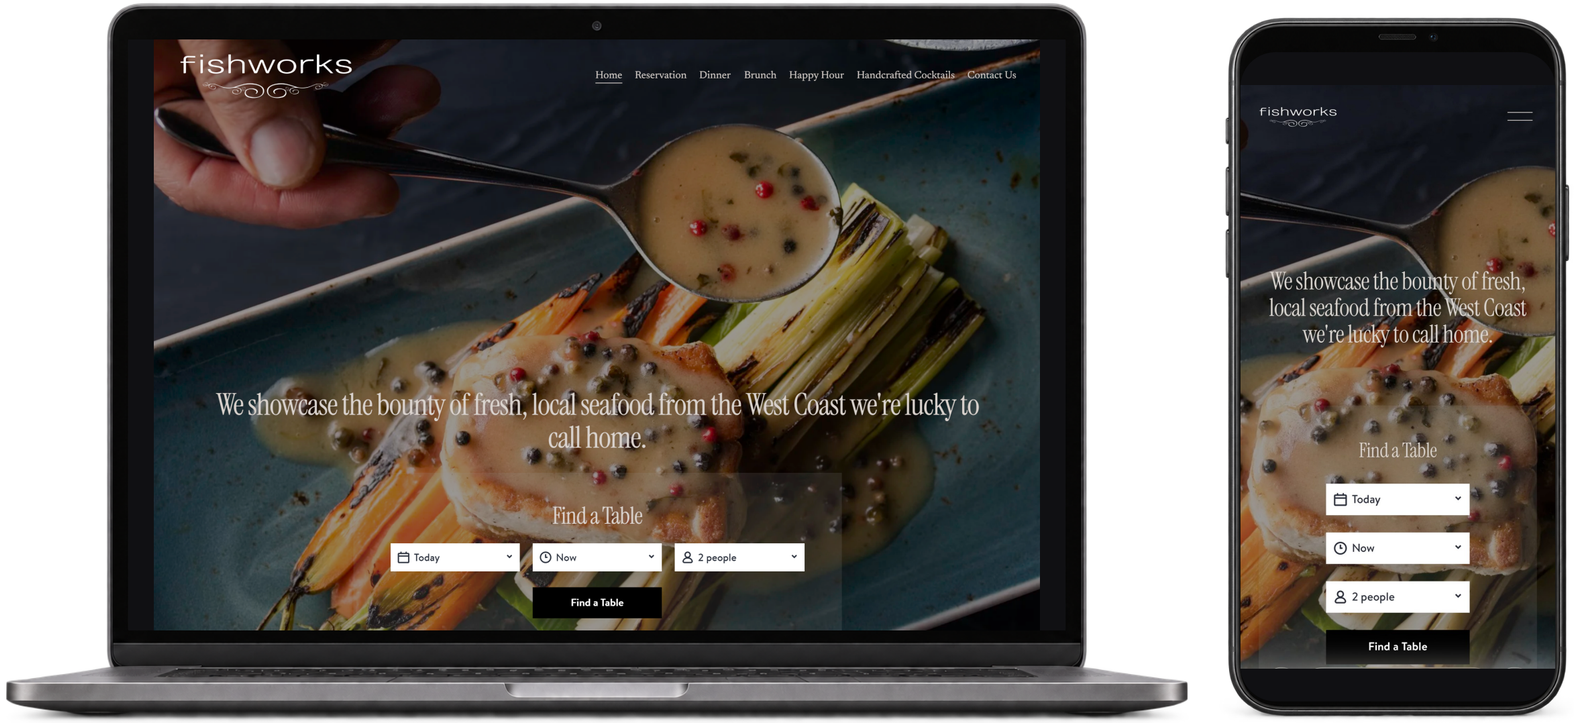

A Manifest V3 Chrome extension, a mobile web version, and documented visual and motion systems.

Claude Code and Codex assisted implementation. I led design and final decisions.

COMPLETED WEBSITE / NORTH VANCOUVER

Fishworks

Start the reservation from the first screen.

Responsive homepage / Desktop and mobile

MY ROLE

Website design, content production, copy and visual direction, including product photography.

DESIGN DECISION

Let the food establish the setting. Keep date, time and party size beside the booking action so guests can begin immediately.

Visit Fishworks

Photography that sets the table.

Food and cocktail photography for Fishworks, alongside content production, copy and website design.

Homepage hero

Seafood detail

Cocktails

Selected photography / Christin Gilbert for Fishworks

WEBSITE DESIGN AND DEVELOPMENT / 2026

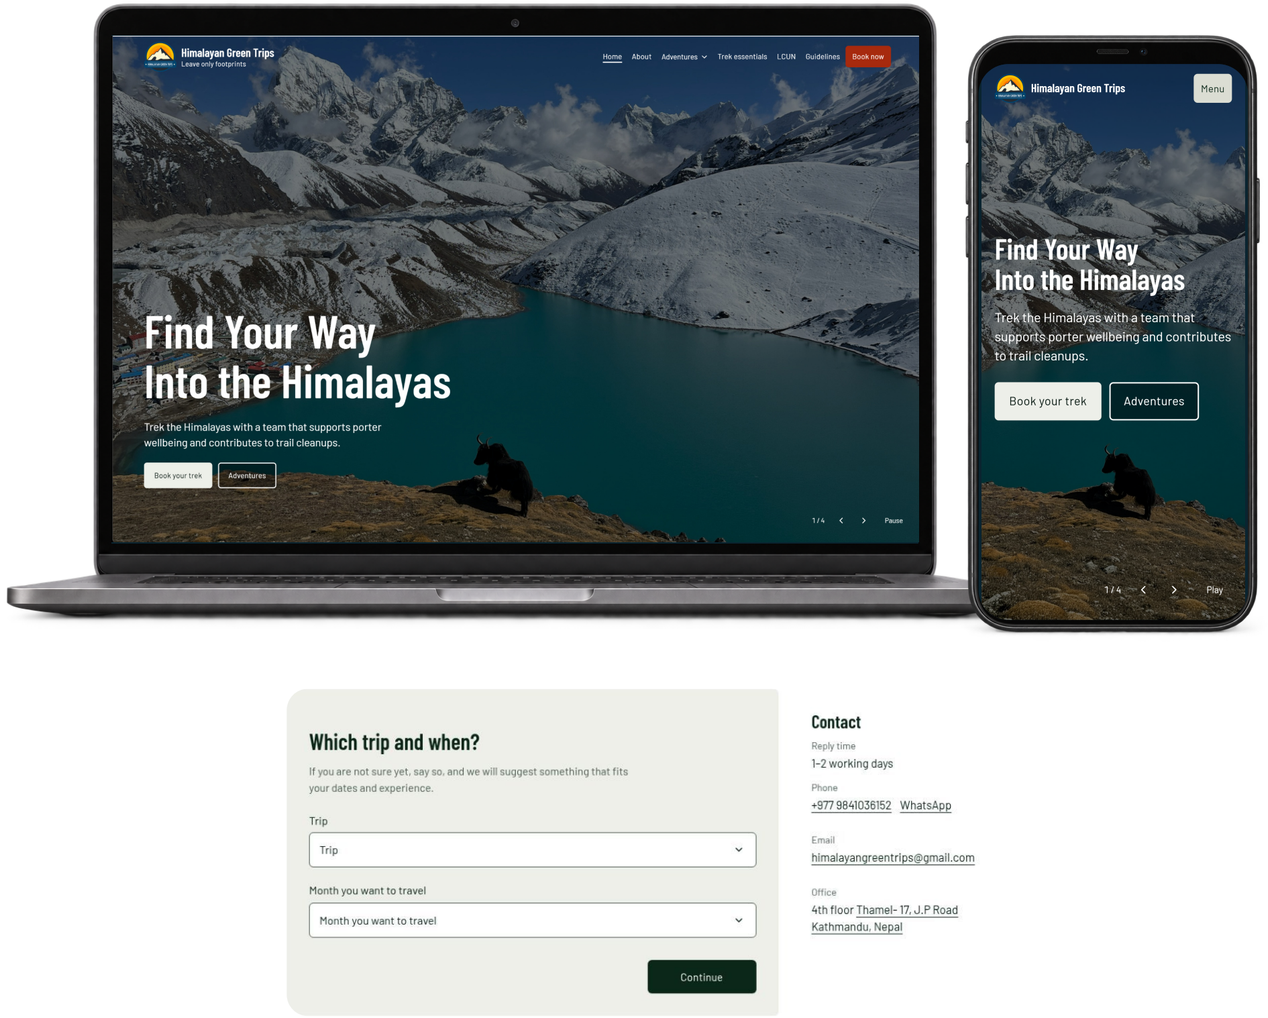

Himalayan Green Trips

Connect choosing a trek with planning the trip.

I designed and built the booking questionnaire, route profiles, calendar and trek-specific packing tools as one planning flow.

A SIMPLER START TO THE ENQUIRY

Begin with a route and travel month. Explain what happens next beside the form.

Desktop, mobile and first enquiry step / Client preview

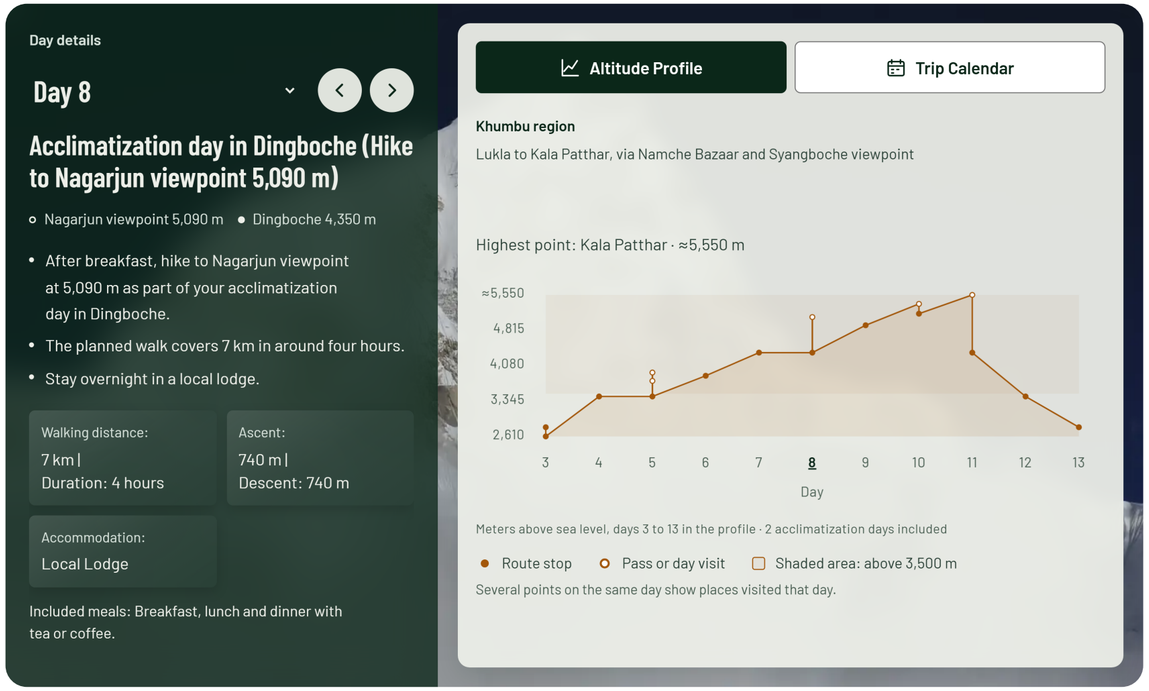

Visit website

Project index

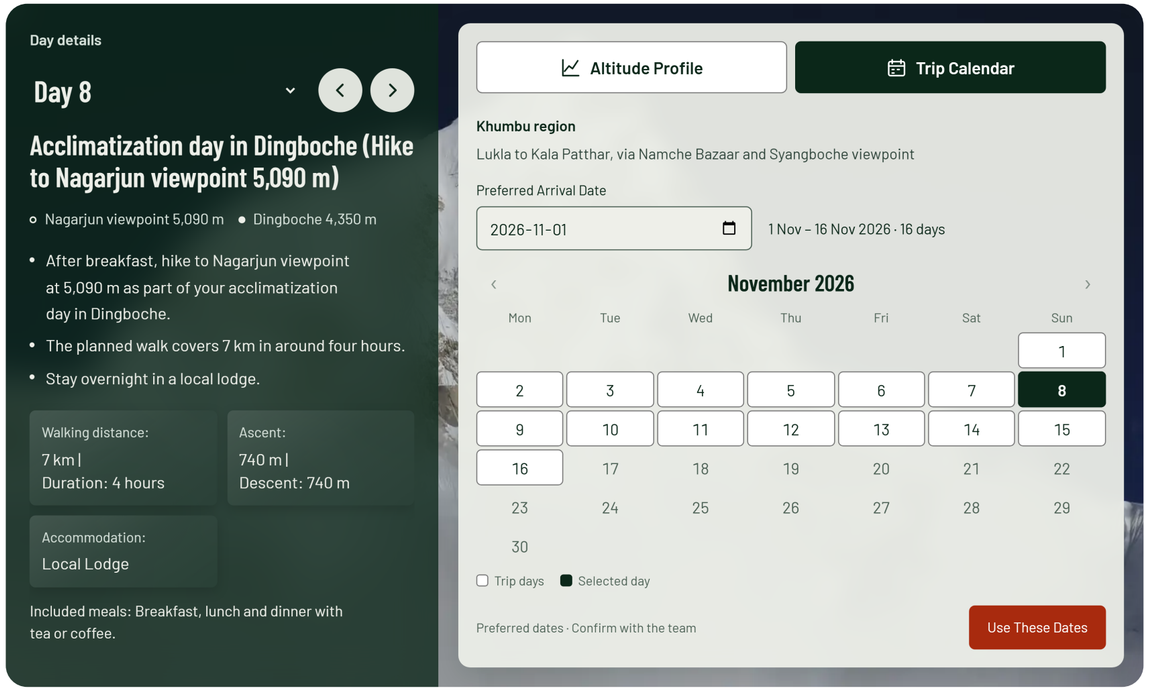

Bring altitude, days and dates together.

Pair the selected day's walking details with the altitude profile. Turn an arrival date into dated trip days.

Route profile / Day 8 in context

Trip Calendar / Illustrative arrival date

Working preview / Same selected day, matching desktop scale

Explore the route profile

Make preparation part of the trip.

A trek-specific packing checklist carries the planning flow beyond the booking enquiry.

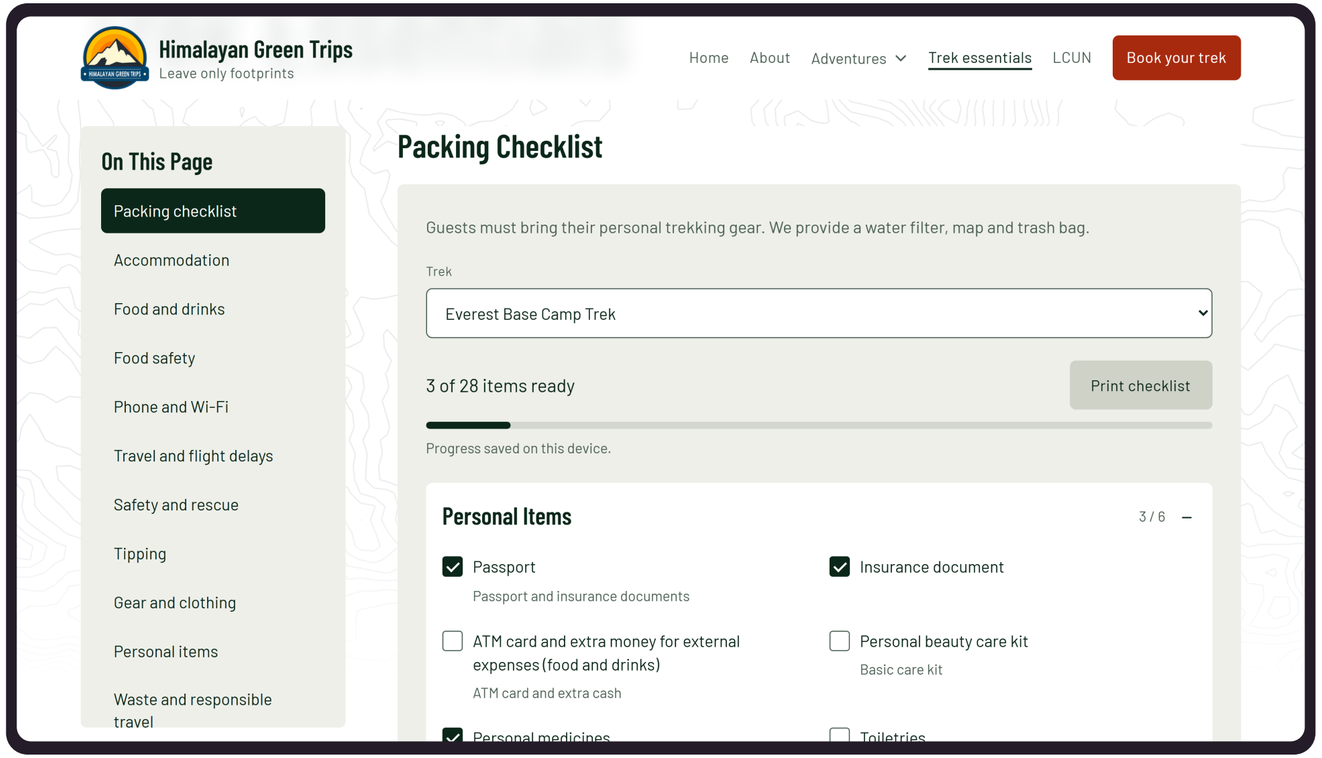

Preparation by route

Choose a trek to load the matching essentials, clothing and equipment.

Room for personal items

Track progress, add personal items and print a copy before travelling.

Explore the packing checklist

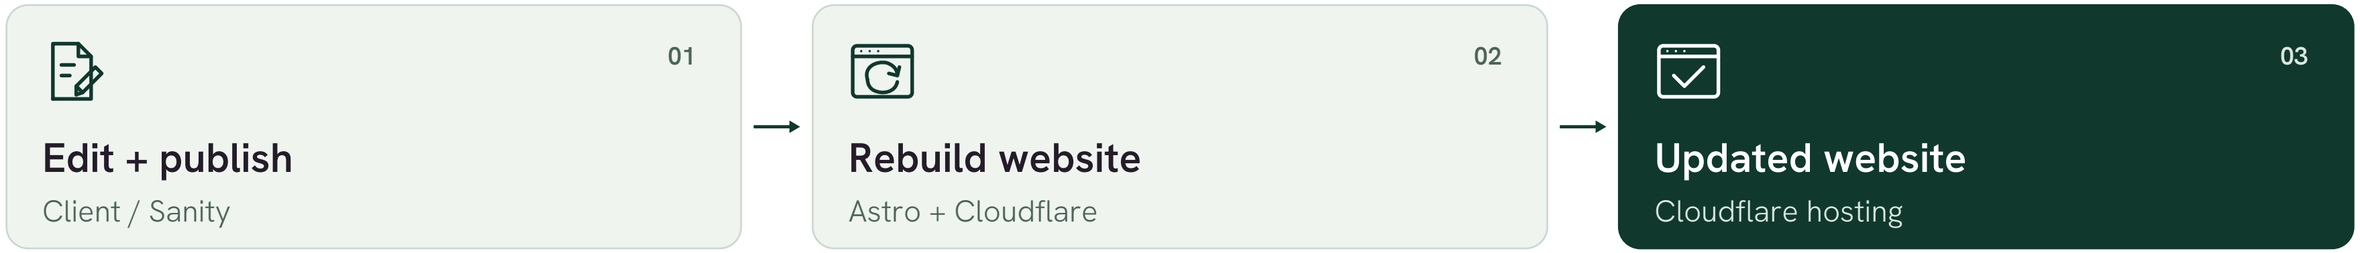

Working preview / Illustrative packing state

Make the system maintainable.

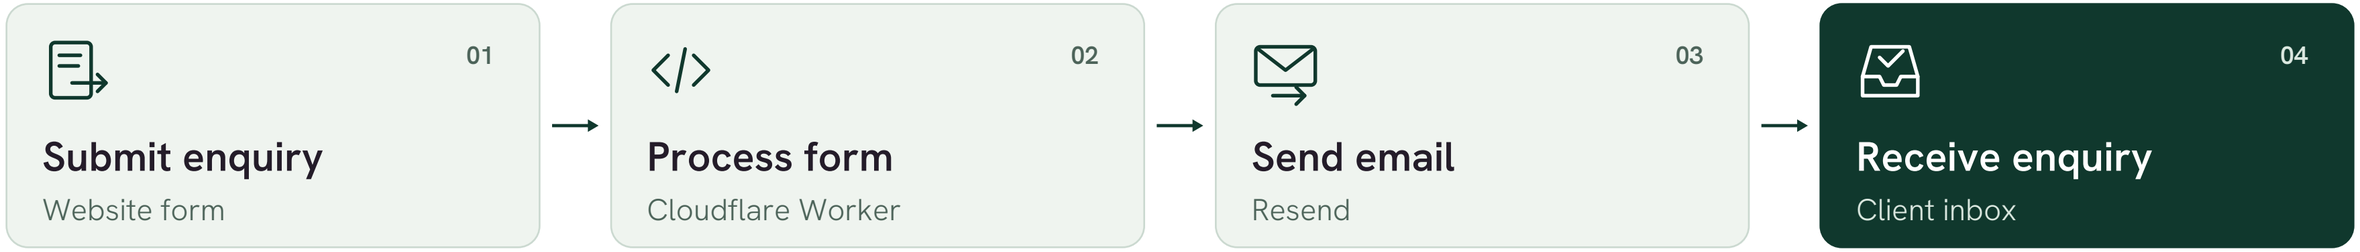

Let the client publish content updates and receive enquiries in their inbox.

CONTENT EDITING AND PUBLISHING / SANITY, ASTRO AND CLOUDFLARE

01 / Content publishing

02 / Enquiry delivery - planned workflow

Custom Sanity editor for content updates. Enquiry delivery shown as a planned integration.

How I direct an AI-assisted build.

Product direction, content decisions and final review remain mine.

01	Define the experience	Set the audience, content and product boundaries. My Morning Door keeps practices optional.
02	Build and review	Work in focused iterations, then test the interaction. HGT connects itinerary details with the altitude view.
03	Check the claims	Review accessibility, content and the limits of the output. Bezier Loupe distinguishes measures from heuristics.

FOR DESIGN ROLES, COLLABORATIONS AND CLIENT PROJECTS

How might we make your next experience calmer?

I connect experience design, cognitive accessibility, content and visual systems with hands-on building, informed by how people think and make decisions.
